SOURCE Slovenski Porocevalec.YUGOSLAV. ROLLING MILL TO BE PARTLY COMPLETED IN 1951

When completed, the seamless-pipe rolling mill in Sisak will cover a 58,600-square-meter area and will be 520 meters long, 200 meters wide in the first section, and 100 meters wide in the second section. The rolling mill will consist of 13 shops. The first section of the rolling mill, the so-called light rolling mill, is scheduled to be completed this year. This section will produce seamless pipes up to 100 millimeters in diameter. Construction work on the central rolling mill section and the heavy rolling mill section is scheduled to be completed this year. These sections will produce seamless pipes up to 400 millimeters in diameter. The machinery for these two sections will be installed in 1952.

A hydropneumatic [hydraulic?] station, which will furnish the driving power to the rolling mill by means of water under pressure, is to be completed this year. Construction of an open-hearth steel mill and a thermal power plant will begin in March 1951. The thermal power plant, which will be 36 meters high, is scheduled to be equipped with its first turbogenerator unit by the end of 1951.

A sketch of the projected seamless-pipe rolling mill in Sisak follows:
